

Development

The hull comprises of a flexible plastic skin with inflatable ribs and forward buoyancy tank to give maximum strength and rigidity while allowing for easy disassembly.

How to disassemble

Step 1 - remove all exterior fittings, such as mast, boom, centreboard and rudder

Step 2 - deflate ribs in hull and unlock front buoyancy tank hinge

Step 3 - Fold in half pushing front buoyancy tank down, folds roughly to the same size as a windsurfer board or surf board.
