fossil free electric propulsion

To whom it may concern

We cannot give firm prices yet because we are in the testing phase of the system, however the pricing will be around 20 % higher than competitive but non retractable systems.

Per motor it will come out around € 17.700,00 for the 10 Kw versions and € 21.860,00 for the 15 Kw versions and this will include the following items.

These prices are excluding Vat, shipping and installation.

Because of the different shapes of the yachts we will make a drawing for the connection for the wing/strut to the hull or bridgedeck but the actual stainless steel hinge unit is not included and can be manufactured locally.

1. Plug and play wiring
2. Hydraulic actuator
3. Wing/Strut
4. Motor
5. Propeller
6. Hydraulic lines and electric switches
7. Electric pump for actuator with manual emergency backup pump
8. Controller
9. Control handle(s)
10. Batteries
11. Control screen or interface for your Chart plotter gps to see rpm, motor temperature, controller temperature, charge or discharge, time to empty.
12. Waterproof on/off key
13. Lights for up and down position
14. Anode plus spare Anode
15. Breaker Fuse Box

We will have systems from 5 up to 25 Kw replacing internal combustion motors of 20 to 90 Hp

The first systems are developed for Catamarans but the same system with a different retractable system is now also developed for Monohulls.

I have attached as much information as presently possible but if you want I can keep you posted on the development of the system so please mail me back with this request.
