

Jan was employed as a production controller.  
The work regards.

Drawing planning and controlling

Produce drawings and sketches for rolling and profile producing

Control of cutting basics for plates and profiles

Planing bevels and control of cutting files

Control of bending and rolling basics

Compilation of sections and prefabrication basics.

Labor shortages was the reason for the unemployment.

Jan does have very good knowledge about how the controller work for the production and prefabrication should be done. He does work on his own and in a professional way. Also he is easy to cooperate with. He also had a good contact with originator and subcontractors. Therefore I wants to give him my very best recommendations and wishes him the best in future.
